

Percent of all Students Exempt for Required Vaccines in School Year 2013-14

Fewer students in all grades (kindergarten through 12th grade) have exemptions to school-entry vaccine requirements this year compared to last year. Students with exemptions are more at risk of getting and spreading vaccine-preventable diseases.

- **Any Exemption:** The student has a documented exemption to any school entry vaccine requirement. Students are counted once here.
- **Medical Exemption:** The student has a documented medical condition which contraindicates getting a required vaccine. Students can have medical as well as non-medical exemptions to school entry vaccine requirements so can be counted in both categories.
- **Non-Medical Exemption:** Parent opts their child out of required vaccine due to personal beliefs, religious beliefs, or religious membership. Students can have non-medical as well as medical exemptions to school entry vaccine requirements so can be counted in both categories.
- The 2013-14 results are based on public and private school reports for 1,038,562 students out of a 1,119,900 total enrollment in all grades kindergarten through 12th grade.
